

BANKING INFORMATION SYSTEM

Internship Report

Submitted By

PEMMA.SRI RAM CHARAN

Bachelor of Computer Applications

Vasireddy Venkatadri Institute Of Technology

2024-2028

July 2026

CERTIFICATE

This is to certify that Ms. Haritha has successfully completed the internship on the project titled
"Banking Information System"
as a part of the Upskill Campus Internship Program.

The project work submitted is her original work and it is satisfactory.

Date: 5 july 2026

Guide / Mentor
Upskill Campus

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to Upskill Campus for providing me with the opportunity to work on this project.

I am thankful to my mentor for their valuable guidance, constant support and encouragement throughout the internship.

I also thank my faculty and friends who helped me in completing this project successfully.

- Sri Ram Charan

1. EXECUTIVE SUMMARY

The Banking Information System is a console based application developed in Java. It allows users to create accounts, login securely using a 4-digit PIN and perform basic banking operations such as deposit, withdrawal, balance check, view account details and transaction history.

The system is menu driven, user-friendly and stores data during the session using Java collections.

2. PREFACE

The objective of this report is to present the design, development and implementation of the Banking Information System completed as part of the Upskill Campus Internship Program.

This report contains the analysis, design, implementation details, screenshots, testing and results of the system.

3. INTRODUCTION

Banking systems are essential in today's world to manage user accounts and transactions securely and efficiently.

This project is a simplified console based banking application that simulates real world banking operations. It provides a secure login system using PIN and allows users to manage their accounts easily.

4. PROBLEM STATEMENT

Manual handling of banking operations is time consuming and error prone.

There is a need for a system that can manage user accounts, ensure security and perform basic banking transactions efficiently.

5. OBJECTIVES

- . To design a simple and secure banking application.
- . To allow users to create accounts and login using PIN.
- . To perform deposit, withdrawal and balance enquiry.
- . To maintain transaction history.
- . To provide a user-friendly menu driven interface.

6. SOFTWARE REQUIREMENTS

6.1 Hardware Requirements

- . Processor : Intel i3 or above
- . RAM : 4 GB or above
- . Hard Disk : 256 GB or above

6.2 Software Requirements

- . Operating System : Windows 10/11
- . Programming Language : Java
- . IDE: Any (VS Code / Eclipse / IntelliJ)
- . JDK : Version 8 or above

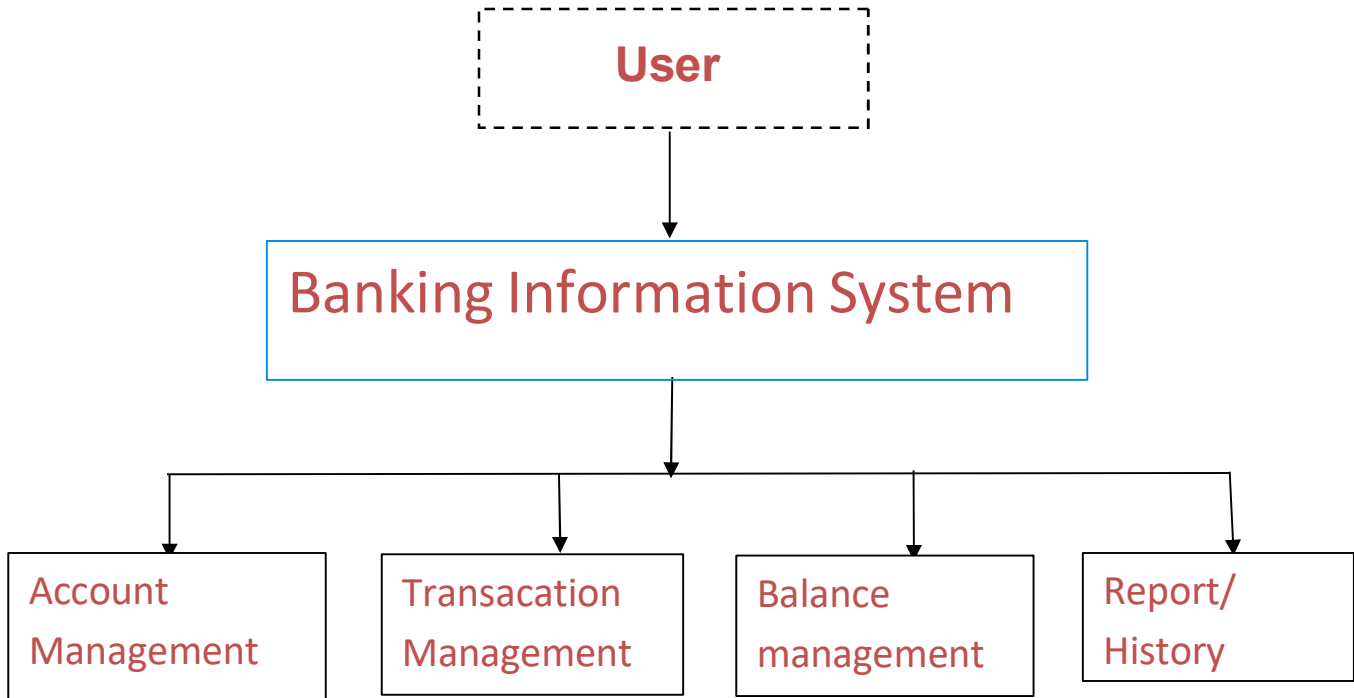

7. EXISTING SYSTEM

In the existing system, banking operations are handled manually through paperwork or limited digital systems that are not user-friendly and lack proper security.

8. PROPOSED SYSTEM

The proposed system is a console based Banking Information System that provides a secure and easy way to manage user accounts and transactions. It uses Java collections to store account and transaction data during the session and offers a menu driven interface for smooth interaction.

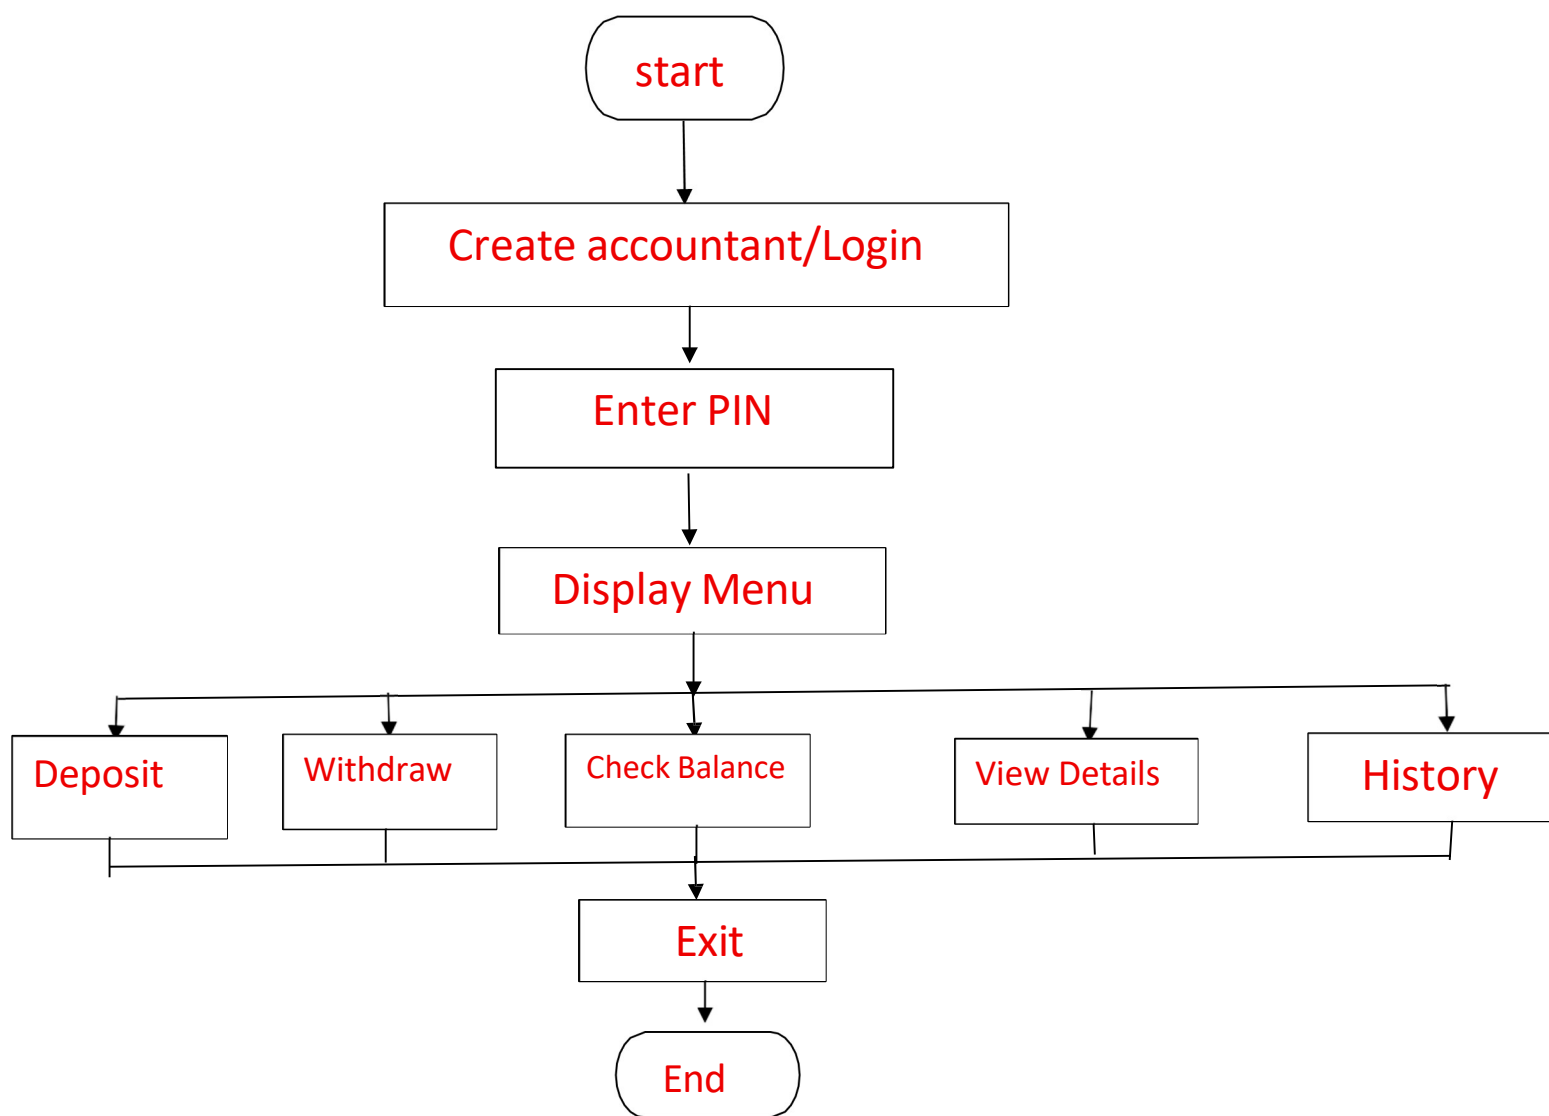

9. HIGH LEVEL DESIGN

10. LOW LEVEL DESIGN

Bank Account
- accountHolder : String - accountNumber : String - balance : double - pin : String -transactions : List<String>
+ deposit(amount : double) : void + withdraw(amount : double) : boolean + getBalancel) : double + getAccountDetails() : String + addTransaction(type : String, arount) : void +get transactions() : List<string>

11. FLOWCHART

12. IMPLEMENTATION

The system is implemented using Java. It uses classes, objects and ArrayList to store accounts and transactions.

Key Classes:

- . BankingInformationSystem (Main Class)
- . BankAccount (Account and operations)
- Scanner (User Input)

13. TESTING & RESULTS (SCREENSHOTS)

1.Account Creation

```
Command Prompt - java Ban X + v
C:\Users\lenovo\OneDrive\Desktop\BankingInformationSystem>javac BankingInformationSystem.java
C:\Users\lenovo\OneDrive\Desktop\BankingInformationSystem>java BankingInformationSystem

2. Withdraw Money
```

14. CONCLUSION

The Banking Information System was successfully developed and tested. It performs all the required operations like account creation, login, deposit, withdrawal, balance enquiry and maintaining transaction history.

15. FUTURE SCOPE

- Add file handling for permanent storage.
- Implement transfer between accounts.
- Develop a graphical user interface (GUI).
